

LENDOS Intake

RULE THE FRONTIER

Loan documents haven't gotten simpler.
Your ingestion process finally has.

Agent notices come in every flavor: different templates, different formats, different ways of saying the same thing. LendOS Intake reads all of it, using proven text-extraction and AI, and built specifically for loan documents.

Digitization is just the start. Intake captures information at the lender level, not just the transaction level. This means key data lenders care about such as their share percentage and exact cash amounts are always discretely captured. You can then route to your team's workflow for manual activity processing, STP processing, or advanced reconciliations.

This is infrastructure built for the way loan documents actually show up, not the way we wish they did. **Rule the frontier.**

Designed to Perform

- Combines proven text-extraction, advanced logic and AI to create next-gen digitization.
- Deployed as a dedicated, single-client instance. Your instance, your data.
- Cloud-based, configured to fit your workflow, quick to deploy.
- State-of-the-art architecture: reliable, secure, private.
- Continuous optimization keeps digitization accurate, granular, and timely.

Product Highlights

- **Universal notice capture** across agents, formats, and events.
- **Lender-level data:** specific amounts and shares, not just global transactions.
- **Processing:** granular filtering, assigning, status tracking and bulk-actions.
- **Score-based digitization:** perfect scores can be auto-approved, anything less can be reviewed quickly.
- **Flexible delivery:** file export (CSV, JSON, Custom) or API.

BUILT FOR USERS

Loan ops teams need tools that deliver data quickly and accurately. Intake fits into the way they already work — not only faster, but familiar.

BUILT TO ADAPT

Agent systems format notices differently, and Intake is built to handle it. It can adopt new formats quickly and get sharper with every notice. Always improving.

BUILT TO WORK

Intake works standalone, right out of the box — simple to set up, processing notices from day one. Pair with LendOS Core to turn digitization into action, seamlessly.

THE LENDOS DIFFERENCE

Notices arrive in every format imaginable. LendOS Intake turns them into clean, structured data: from digitization, through processing, to delivery, however your systems need it.

Agent Notices & Documents

LENDOS Intake

Digitization

Data point identification and exception management, through notice approval.

Processing

Granular filtering, assigning, status tracking and bulk-actions.

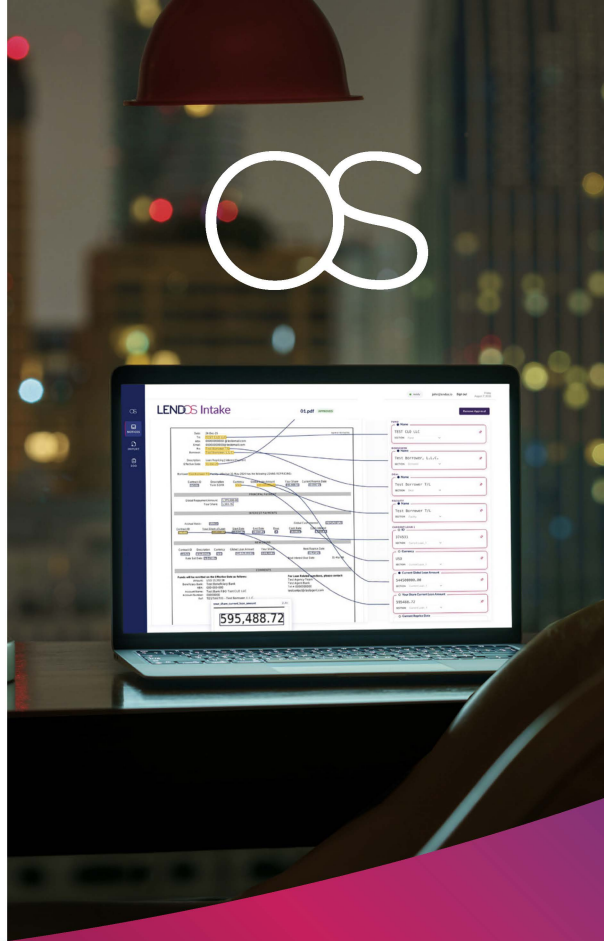

Delivery

File export (CSV, JSON, Custom) or API, however your systems need it.

Delivered Your Way

File Export (CSV, JSON, Custom) · API · LendOS Core via STP
